

ANKC SURVEY RESULTS GERMAN SHEPHERD DOG

Recently the ANKC conducted a survey to ascertain the opinion of registered German Shepherd Dog owners in relation to Litter Registration Limitations of the breed. The response received has indicated overwhelming support for the following:

Litter Registration Limitations be amended as follows and apply for litters born from 1 June 2011:-

- 1.1 Both parents of every litter must be screened for Hip Dysplasia through an official Hip Dysplasia Control Scheme. Where the parents have been born after 1.1.10, they must record a score of no more than 12 on either hip, or in the case of imported animals, a grading that is deemed to be acceptable for breeding in their country of origin.
- 1.2 Both parents of every litter must be screened for Elbow Dysplasia through an official Elbow Dysplasia Control Scheme. Where the parents have been born after the 1.1.10, they must record a grading of Normal, Grade One or Grade Two on both elbows, and be free from the condition of UAP (Ununited Anconeal Process.)

Breeders of litters whelped on or after 1 June 2011, will be required to comply as a prerequisite to registration of any litter on the ANKC Main Register. Dogs must be positively identified by microchip, or tattoo prior to being x-rayed. Litters which do not meet the above requirements will be placed on the Limited Register and will be flagged not to be upgraded.
